Country: United States

Title: ABC News/Washington Post Poll: Trump/2020
Presidential Election/Gun Control

Survey Organization(s): Langer Research Associates

Sponsor(s): ABC News; Washington Post

Field Dates: September 2 - 5, 2019

Sample: National adult

Sample Size: 1003

Sample Notes: None

Interview method: Telephone Interview, Cell Phone; Telephone
Interview, Landline; Computer-Assisted telephone
interview (CATI)

Weight Location: Columns 328-337 (xx.xxxxxxx) – Varname:
WEIGHT

No. of records per respondent: 1

Usage Notes: The survey was produced for ABC News by Langer
Research Associates of New York, N.Y., with
sampling and data collection by Abt Associates of
Rockville, Md.

Please note that data provided by the Roper Center for Public Opinion
Research may not be re-disseminated without written permission. The
results of any analyses conducted on the data may, however, be published
with appropriate acknowledgments and source citation.

The Roper Center Transparency Score Project is intended to measure disclosure of key elements of survey research. The Transparency Score is **not** an indicator of data quality. Transparency Project scores are calculated as follows: (10 points for providing a dataset+2 points for every other applicable core item+1 point for every applicable additional item)/(total possible points) X 10. Studies with a score >=9 and <=10 greatly exceed Roper Center requirements; scores >=8 and <9 exceed requirements; and scores >=6 and <8 meet Roper Center requirements.

METHODOLOGY – This ABC News/Washington Post poll was conducted by landline and cellular telephone Sept. 2-5, 2019, in English and Spanish, among a random national sample of 1,003 adults. Results have a margin of sampling error of 3.5 points, including the design effect. Partisan divisions are 28-24-37 percent, Democrats-Republicans-independents.

The survey was produced for ABC News by Langer Research Associates of New York, N.Y., with sampling and data collection by Abt Associates of Rockville, Md.

ABC News' Polling Methodology and Standards

By GARY LANGERLANGER RESEARCH ASSOCIATES

July 23, 2015

A summary of ABC News polling standards and methodology follows.

Standards

[Langer Research Associates](#), primary polling provider to ABC News, advises the news division on standards for disclosure, validity, reliability and unbiased content in survey research and evaluates data when requested to establish whether it meets these standards.

On disclosure, in addition to the identities of the research sponsor and field work provider, we require a detailed statement of methodology, the full questionnaire and complete marginal data. If any of these are lacking, we recommend against reporting the results. Proprietary research is not exempted.

Methodologically, in all or nearly all cases we require a probability-based sample, with high levels of coverage of a credible sampling frame. Non-probability, self-selected or so-called “convenience” samples, including internet opt-in, e-mail, “blast fax,” call-in, street intercept and non-probability mail-in samples do not meet our standards for validity and reliability, and we recommend against reporting them.

We do accept some probability-based surveys that do not meet our own methodological standards – in terms of within-household respondent selection, for example – but may recommend cautious use of such data, with qualifying language. We recommend against reporting others, such as pre-recorded autodialed surveys, even when a random-digit dialed telephone sample is employed.

Langer Research Associates has published briefing papers summarizing recent research on non-probability sampling, including [opt-in online surveys](#), the use of [social media](#) (and related approaches) to estimate public opinion and [challenges in the use of “big data.”](#) We’ve also commented on non-probability sampling in the [Fall 2013 issue of the Journal of Survey Statistics and Methodology](#) and in a [2012 presentation](#) at the annual conference of the American Association for Public Opinion Research.

In terms of survey content, we examine methodological statements for misleading or false claims, questionnaires for leading or biasing wording or ordering, and analyses and news releases for inaccurate or selective conclusions.

In addition to recommending against reporting surveys that do not meet appropriate standards for validity and reliability, we promote and strongly encourage the reporting of good-quality polls that break new ground in opinion research.

Sample Design

ABC and The Washington Post direct the methodological approach to full-length ABC/Post polls in consultation with our field work provider for these surveys, Abt SRBI of New York, N.Y. Shorter-length ABC/Post polls are conducted via an omnibus survey produced by SSRS of Media, Pa. See methodological details [here](#). Additionally, as of August 2016, ABC News is partnering with SSRS on polling conducted via the online SSRS Probability Panel; see details [here](#).

Before October 2008, full-length ABC/Post polls were conducted by calling samples of landline telephone numbers only. From October 2008 through June 2015 we added cell phone interviews via a non-overlapping dual-frame sample design, with separate sampling frames for landline and cell phone-only respondents, as detailed in this [paper](#). The cell phone-only proportion, based on data from the National Health Interview Survey, grew from 100 out of 1,000 interviews to 335 per 1,000 during this period.

The non-overlapping design served well, especially through a time in which cell phone interviews were much costlier than landline interviews. However, the cost differential has flattened over time and the incidence of cell phone use has continued to grow, producing a shortfall in the number of young adults reached via this design. As a result, in July 2015 we adopted an overlapping dual frame sample design, in which cell phone respondents are interviewed regardless of whether or not they also have a landline.

The proportion of cell phone interviews again is driven by the NHIS estimate of cell phone-only respondents; to achieve our target, 65 percent of all interviews are conducted by cell phone, with the remaining 35 percent interviewed via landline.

Sampling

Cell phone and landline samples are produced by Survey Sampling Inc. of Shelton, Conn. For landline interviews, SSI selects a sample of landline households in the continental United States via random digit dialing, in which all landline telephone numbers, listed and unlisted, have an equal probability of selection. Landline numbers are drawn proportionate to their estimated distribution in the country's nine Census divisions.

SSI starts with a database of all listed landline telephone numbers, updated on a four- to six-week rolling basis, 25 percent of listings at a time. This database of directory-listed numbers is then used to determine all active blocks – as we define it, contiguous groups of 100 phone numbers for which more than one residential number is listed. All possible numbers in active blocks are added to the random digit database.

Until 2005, ABC News followed the industry norm of excluding all listed business numbers (compiled from sources such as Yellow Pages directories and the Dun and Bradstreet Business Data database) from the sample. However, an ABC-led study (Merkle, Langer, Cohen, Piekarski, Benford & Lambert, 2009, *Public Opinion Quarterly*) found that this “cleaning” process excludes respondents who have home-based business-listed phones and no other lines at home on which they take calls, creating 3 percent noncoverage of eligible households with no offsetting gains in productivity. As a result of this evaluation, we do not exclude listed business numbers from our landline sample, with the exception of those in business-only blocks or exchanges.

Each telephone exchange in the landline sample is assigned to the county where it's most prevalent. In the first stage of selection, the database is sorted by state and county, and the number of telephone numbers to be sampled within each county is determined using systematic sampling procedures from a random start, such that each county is assigned a sample size proportional to its share of possible numbers. In the second stage of selection, telephone numbers are sorted within county by area code, exchange and active block, and using systematic sampling procedures from a random start, individual phone numbers within each county are selected. The sampled phone numbers are pre-dialed via a non-ringing auto-dialer to reduce dialing of non-working numbers.

For the cell phone sample, SSI begins with a monthly listing of every existing telephone area code and exchange. About half of these are pooled by their producers in contiguous groups of 10 100-block phone numbers, or 1,000-blocks, with information including whether each pooled 1,000-block does or does not include cell phone numbers, either solely or on a shared basis with landline numbers.

All cell-inclusive 1,000-blocks are included in the cell phone sample. For numbers that are not 1,000-block pooled, cell phone service information is available at the exchange level only; therefore all numbers in those exchanges also are included. All numbers used in cell phone sampling are then handled at the 100-block level. Given the absence of any cell phone directory, all 100-blocks in dedicated wireless exchanges and 1,000-blocks used for sampling purposes are considered active.

For exchanges or 1,000-blocks that have been classified by their carrier as providing both landline and wireless service, each 100-block is compared to the database of landline 100-blocks; 100-blocks that appear on the landline frame are removed from the wireless frame and 100-blocks with no directory-listed numbers are retained. This ensures that the wireless frame and list-assisted RDD frame are mutually exclusive while still providing coverage of prefixes and 1,000-blocks that are classified as including both landline and wireless service.

Each 100-block is assigned to a county based on the billing coordinates of the exchange. The database is sorted by county code, carrier name and 100-block. A sampling interval is determined by dividing the universe of eligible 100-blocks by the desired sample size. From a random start within the first sampling interval, a systematic nth selection of 100-blocks is performed and a 2-digit random number between 00 and 99 is appended to each selected 100-block stem.

Interviewing

In each sample, phone numbers are released for interviewing in replicates by Census region (cell) or division (landline) to allow for sample control. Numbers are called multiple times during the field period in multi-night polls; the standard for full-length ABC/Post polls is a minimum of six calls to each number. Interviews are conducted via a computer-assisted telephone interviewing (CATI) system. Abt SRBI's professional interviewers, and their supervisors, are extensively trained in interviewing practices, including techniques designed to achieve the highest possible respondent cooperation.

For landline respondents, interviewers ask to speak with the youngest male or youngest female at home. Cell-only respondents are screened for age eligibility (18+). Cell-only respondents are not offered compensation, but a reimbursement check is offered if use of minutes is raised as an objection. Cell sample respondents' place of residence is checked and their Census region adjusted accordingly if necessary.

As of April 2013, Spanish-language interviewing was added to full-length ABC/Post polls for respondents who indicate a preference to be interviewed in Spanish. Spanish-language interviewing in SSRS omnibus surveys began in October 2009.

Weighting

Data are adjusted to account for the greater probability of respondents who have both a cell and landline phone, compared with those who are cell-only or landline-only. The data then are weighted using demographic information from the U.S. Census and NHIS to adjust for variance from population values. Weights may include average partisan self-identification in current and recent ABC/Post data, based on a standardized rule.

Until 2008 we used cell-based weighting, in which respondents were classified into one of 48 or 32 cells (depending on sample size) based on their age, race, sex and education; weights were assigned so the proportion in each cell matched the Census Bureau's most recent Current Population Survey data. To achieve greater consistency and reduce the chance of large weights, in January 2008 we adopted iterative weighting, also known as raking or rim weighting, in which the sample is weighted sequentially to Census targets one variable at a time, continuing until the optimum distribution is achieved.

From October 2008 to June 2015, data were post-stratified to Census region by sample type; rim weights then were calculated using Census parameters for age, race/ethnicity, sex and education. The precision of race/ethnicity weights was enhanced in April 2013. In July 2015, post-stratification by sample type was discontinued and Census region and phone service (landline only, dual service and cell-only) were added to the rim weighting variables. Weights are capped at lows of 0.2 and highs of 6.

Surveys commonly are weighted to the number of telephone lines in each respondent's home to adjust for the higher probability of selection of multiple-line households. ABC News has studied the effect of such weighting (Merkle & Langer, *Public Opinion Quarterly*, Spring 2008) concluding that it carries the risk of distortion, and, when done properly, has no meaningful impact on the data. ABC News polls therefore are not weighted to the number of household phone lines.

Sampling Error

Poll results may deviate from full population values because they rely on a sample rather than a census of the full population. Sampling error can be calculated when probability sampling

methods, such as those described here, are employed, using the standard formula (at the 95 percent confidence level) of $(\text{SQRT}(.25/\text{sample size})) * 1.96$, plus adjustment for design effects. There can be other sources of differences in polls, such as question wording and order and systematic noncoverage or selection bias.

As a function of sample size, sampling error is higher for subgroups. We analyze subgroups only as small as 100 cases (or very near it). See our fuller description of sampling error [here](#) and our online margin-of-error calculator [here](#).

Response Rates

A survey's response rates represents its contact rate (the number of households reached out of total telephone numbers dialed, excluding an estimate of nonworking and business numbers) multiplied by its cooperation rate (the number of individuals who complete interviews out of total households reached).

Response rates are calculated using sample dispositions. In November 2014 we [posted online](#) available sample dispositions for all ABC News and ABC News/Washington Post polls since 1999.

It cannot be assumed that a higher response rate in and of itself ensures greater data integrity. By including business-listed numbers, for instance, we increase coverage yet decrease contact rates (and therefore overall response rates). On the other hand, surveys that, for instance, do no within-household selection, or use listed-only samples, will increase their cooperation or contact rates (and therefore response rates), but at the expense of random selection or population coverage. (See [Langer, Public Perspective, May 2003](#).)

Research has found no significant attitudinal biases as a result of response rate differences. A study published in 2000, "[Consequences of Reducing Nonresponse in a National Telephone Survey](#)" (Keeter, Miller, Kohut, Groves & Presser, POQ 64:125-48), found similar results in surveys with 61 and 36 percent response rates. A follow-up in 2006, "[Gauging the Impact of Growing Nonresponse on Estimates from a National RDD Telephone Survey](#)" (Keeter, Kennedy, Dimock, Best & Craighill, POQ 70:759-79), based on surveys with 50 and 25 percent response rates, again found "little to suggest that unit nonresponse within the range of response rates obtained seriously threatens the quality of survey estimates." Still another Pew comparison, in 2012, with a yet lower response rate, had similar results. As far back as 1981, in "Questions & Answers in Attitude Surveys," Schuman and Presser, describing two samples with different

response rates but similar results, reported (p. 332), “Apparently the answers and associations we investigate are largely unrelated to factors affecting these response rate differences.”

Among many other sources, in "The Causes and Consequences of Response Rates in Surveys by the News Media and Government Contractor Survey Research Firms," in *Advances in Telephone Survey Methodology*, Chapter 23, Wiley 2007), Holbrook, Krosnick and Pfent reported that “lower response rates seem not to substantially decrease demographic representativeness within the range we examined. This evidence challenges the assumptions that response rates are a key indicator of survey quality.”

Pre-election Polls

Pre-election polling presents particular challenges. As Election Day approaches these polls are most relevant and accurate if conducted among voters. Yet actual voters are an unknown population – one that exists only on (or, with absentees, shortly before) Election Day. Pre-election polls make their best estimate of this population.

Our practice for ABC News is to develop a range of “likely voter” models, employing elements such as self-reported voter registration, intention to vote, attention to the race, past voting, age, respondents’ knowledge of their polling places and political party identification. We evaluate the level of voter turnout produced by these models and diagnose differences across models when they occur.

ABC News has presented detailed evaluations of our tracking polls at polling conferences and in published work (Langer and Merkle 2001; Merkle, Langer and Lambert 2005; also in [Public Opinion Polling in a Globalized World](#), Springer 2008; Langer et al. 2009).

Study Note

This sample excludes adults who don't have a cell or landline phone (3.2 percent, per the NHIS); who don't speak English or Spanish (1.5 percent, per the American Community Survey conducted by the U.S. Census Bureau); and who live in institutional group facilities where individual telephone access is disallowed (chiefly, adult correctional facilities), about 0.9 percent. Allowing for some overlap of these groups, the frame covers approximately 95 percent of the target population, U.S. adults age 18+.

ABC News/Washington Post Poll #1207: September National Poll

<u>SAMPTYPE</u>	<u>DEFINITION</u>
1	Landline RDD Sample
2	Landline Oversample
3	Cell Phone Sample
4	Cell Phone Oversample

READ STANDARD INTRO3 IF SAMPTYPE=1,2 (LANDLINE):

Hello, I'm (NAME), calling for the ABC News public opinion poll. We're not selling anything, just doing an opinion poll on interesting subjects in the news. Out of all the people age 18 or older who are AT HOME RIGHT NOW, may I please speak to the YOUNGEST (male/female)? *(IF NO MALE/FEMALE IN THE HOUSEHOLD, ASK: Then may I please speak to the YOUNGEST (female/male)?)*

READ INTRO4 IF SAMPTYPE=3,4 (CELL PHONE):

Hello, I'm (NAME), calling for the ABC News public opinion poll. We're not selling anything, just doing an opinion poll on interesting subjects in the news.

IF RESPONDENT SITUATION/LOCATION IS INCONVENIENT, E.G. RESPONDENT IS DRIVING, SCHEDULE CALLBACK.

*****ASK IF INTRO4=1 (CELL PHONE)*****

S1. Are you at least 18 years old, or under 18?

1 Yes, 18+

CONTINUE TO Q1

2 No, Under 18

TERMINATE, DISPO AS "CELL/UNDER 18"

IF CALL DROPS OR BECOMES UNINTELLIGIBLE, RECALL IN FIVE MINUTES. IF NO ANSWER, TRY AGAIN IN APPROXIMATELY ONE HOUR. IF NO CONNECT, LEAVE MESSAGE: Hello, I'm (NAME) calling for the ABC News public opinion poll. Our call dropped earlier. I'll try you again later. **CONTINUE RECALLS EVERY HOUR OR TWO UNTIL SHIFT ENDS. CONTINUE RETRYING WITH NEXT SHIFT.**

IF SAMPTYPE=3,4 (CELL PHONE), IF RESPONDENT ASKS ABOUT OR OBJECTS TO COST OF CALL OR LOSS OF MINUTES DURING ANY PART OF THE INTERVIEW, TYPE "CELL" AT PROMPT TO REACH THE FOLLOWING SCREEN:

COM. **(TO BE READ IF CELL PHONE RESPONDENT ASKS ABOUT OR OBJECTS TO COST OF CALL OR LOSS OF MINUTES)** We are able to offer you ten dollars as reimbursement for the use of your cell phone minutes for this call. If you complete the full survey, I will ask for your mailing address at the end of the survey so we can send you a check. Is this OK?

DO NOT READ LIST.

1 Respondent ACCEPTS reimbursement offer and CONTINUES interview - **RETURN TO PREVIOUS SCREEN AND CONTINUE**

2 Respondent DECLINES reimbursement offer and CONTINUES interview - **RETURN TO PREVIOUS SCREEN AND CONTINUE**

3 Respondent IGNORES/DECLINES reimbursement offer and TERMINATES interview - **TERMINATE, DISPO AS "TQCOM REIMBURSEMENT DECLINED"**

4 Respondent TERMINATES interview before reimbursement offer given - **TERMINATE, DISPO AS "TQCOM REIMBURSEMENT NOT OFFERED"**

1. Do you approve or disapprove of the way Donald Trump is handling his job as president?

IF APPROVE: Do you approve STRONGLY or SOMEWHAT?

IF DISAPPROVE: Do you disapprove STRONGLY or SOMEWHAT?

- 1 Approve STRONGLY
- 2 Approve SOMEWHAT
- 3 Disapprove SOMEWHAT
- 4 Disapprove STRONGLY
- DK/No opinion
- NA/Refused

2. Do you approve or disapprove of the way Trump is handling the economy?

- 1 Approve
- 2 Disapprove

DK/No opinion
NA/Refused

2a. Do you approve or disapprove of the way Trump is handling trade negotiations with China?

- 1 Approve
- 2 Disapprove
- DK/No opinion
- NA/Refused

3. Would you describe the state of the nation's economy these days as excellent, good, not so good or poor?

- 1 Excellent
- 2 Good
- 3 Not so good
- 4 Poor
- DK/No opinion
- NA/Refused

5. As you may know, periods of economic growth are followed by periods of recession. Do you think a recession over the next year is very likely, somewhat likely, somewhat unlikely or very unlikely?

- 1 Very likely
- 2 Somewhat likely
- 3 Somewhat unlikely
- 4 Very unlikely
- DK/No opinion
- NA/Refused

6. *****ROTATE ORDER OF ITEMS IN PARENTHESES*****

Do you think Trump's trade and economic policies have (decreased) the chance of a recession in the next year, (increased) the chance of a recession, or have they made no difference in this?

- 1 Decreased
- 2 Increased
- 3 Made no difference
- DK/No opinion
- NA/Refused

2b. How concerned are you that the current trade dispute with China will raise the price of things you and your family buy? Are you very concerned about this, somewhat concerned, not so concerned or not concerned at all?

- 1 Very concerned
- 2 Somewhat concerned
- 3 Not so concerned
- 4 Not concerned at all
- DK/No Opinion
- NA/Refused

On another topic...

901. Generally speaking, do you usually think of yourself as: (READ LIST)

*****ROTATE ORDER OF CODES 1 AND 2*****

- 1 A Democrat
- 2 A Republican
- 3 An Independent - ASK Q904
- 4 Or what? - ASK Q904
- (DO NOT READ BELOW)
- DK/No opinion - ASK Q904
- NA/Refused - ASK Q904

904. *****ASK IF NOT DEMOCRAT OR REPUBLICAN (Q901 NOT 1 OR 2)*****

Do you lean more towards the: (READ LIST)

*****ROTATE ORDER OF CODES 1 AND 2 IN SAME ORDER AS Q901*****

- 1 Democratic Party
- 2 Or, Republican Party
- (DO NOT READ BELOW)
- 3 (VOL) Neither
- DK/No opinion
- NA/Refused

905. Are you registered to vote at your present address, or not?

- 1 Yes
- 2 No
- DK/No opinion
- NA/Refused

10. *****ASK IF LEANED DEMOCRAT (Q901=1 OR Q904=1)*****

Now I'll read a list of candidates for the Democratic nomination for president in 2020. After I've read the full list, please tell me whom you'd vote for in the primary or caucus in your state.

*****SCRAMBLE ORDER OF CODES 1-19*****

- 1 Michael Bennet
- 2 Joe Biden
- 3 Cory Booker
- 4 Steve Bullock

5 Pete Buttigieg [BOOT-uh-jidge]
 6 Julian [HOO-lee-an] Castro
 7 Bill de Blasio [duh BLAH-zee-oh]
 8 John Delaney
 9 Tulsi Gabbard [TULL-see GAB-ard]
 11 Kamala [COMMA-la] Harris
 12 Amy Klobuchar [KLO-boo-char]
 13 Beto [BET-oh] O'Rourke
 14 Tim Ryan

- 5 (VOL) Would not vote
- DK/No opinion **ASK Q19**
- NA/Refused **ASK Q19**

19. *****ASK IF NOT TRUMP, [ITEM], OR WOULD NOT VOTE (Q18=3,4,DK,REF)*****
*****ROTATE ORDER OF ITEMS IN PARENTHESES IN SAME ORDER AS Q18*****

Would you lean toward (Trump) or (ITEM)?

- 1 Trump
- 2 [ITEM]
- 3 (VOL) Other candidate
- 4 (VOL) Neither
- 5 (VOL) Would not vote
- DK/No opinion
- NA/Refused

20. Overall, do you have a favorable or unfavorable impression of [ITEM]?

How about [NEXT ITEM]? **IF NEEDED:** Overall, do you have a favorable or unfavorable impression of [NEXT ITEM]?

GET ANSWER AND ASK: Do you feel that way STRONGLY, or SOMEWHAT?

*****ASK ALL, SCRAMBLE ITEMS*****

- a. Donald Trump
- b. Joe Biden
- c. Bernie Sanders
- d. Elizabeth Warren
- e. Kamala [COMMA-la] Harris
- f. Pete Buttigieg [BOOT-uh-jidge]

- 1 Favorable, STRONGLY
- 2 Favorable, SOMEWHAT
- 3 Unfavorable, SOMEWHAT
- 4 Unfavorable, STRONGLY
- DK/No opinion
- NA/Refused

Thinking about gun issues...

21x. Would you support or oppose a nationwide ban on the sale of assault weapons?

GET ANSWER AND ASK: Do you feel that way STRONGLY or SOMEWHAT?

- 1 Support STRONGLY
- 2 Support SOMEWHAT
- 3 Oppose SOMEWHAT
- 4 Oppose STRONGLY
- DK/No Opinion
- NA/Refused

21. Would you support or oppose [ITEM]?

*****ASK ALL, SCRAMBLE ITEMS*****

- a. requiring background checks on all potential gun buyers, including private sales and gun shows
- b. a nationwide ban on high-capacity ammunition clips, meaning those containing more than 10 bullets
- c. a law allowing the police to take guns away from people who have been found by a judge to be a danger to themselves or others
- d. a mandatory buyback program in which the federal government would require assault weapon owners to turn in those weapons in exchange for payment

- 1 Support
- 2 Oppose

DK/No Opinion
NA/Refused

22. *****ROTATE ORDER OF ITEMS IN PARENTHESES*****

Who do you trust more to handle gun laws in this country - (Trump) or (the Democrats in Congress)?

- 1 Trump
 - 2 Democrats in Congress
 - 3 (VOL) Both equally
 - 4 (VOL) Neither
- DK/No opinion
NA/Refused

24. How confident are you that [ITEM] would reduce mass shootings in this country - very confident, somewhat confident, not so confident or not confident at all?

What about [NEXT ITEM]? **IF NEEDED:** How confident are you that [NEXT ITEM] would reduce mass shootings in this country - very confident, somewhat confident, not so confident or not confident at all?

*****ROTATE ITEMS*****

- a. Improving mental health monitoring and treatment
- b. Passing stricter gun control laws

- 1 Very confident
 - 2 Somewhat confident
 - 3 Not so confident
 - 4 Not confident at all
- DK/No opinion
NA/Refused

25. How worried are you, if at all, that a mass shooting could happen in your community - is that something that worries you a great deal, somewhat, not so much or not at all?

- 1 A great deal
 - 2 Somewhat
 - 3 Not so much
 - 4 Not at all
- DK/No opinion
NA/Refused

26. Do you or does anyone in your house own a gun, or not?

- 1 Yes
 - 2 No
- DK/No opinion
NA/Refused
